Report of “World TB Day”celebration

World TB Day is observed on March 24, 2023 with the theme '**Yes! We can end TB!**', aims to raise public awareness and understanding about one of the infectious diseases, inspire hope and encourage high-level leadership, increased investments, faster uptake of new WHO recommendations, adoption of innovations, accelerated action, and multisectoral collaboration to combat the TB epidemic. On this day, more than 140 years ago, Dr. Robert Koch announced his discovery that most human tuberculosis (TB) is caused by the bacterium *Mycobacterium tuberculosis*(*Mtb*). Although our scientific insight into this disease has grown over the past century, TB is still one of the deadliest infectious diseases on the planet. Today, NIAID (*National Institute of Allergy and Infectious Diseases*) joins the world in a message of hope: “Yes! We can end TB!” Although elimination of Tuberculosis is one of the sustainable development targets to be achieved by 2030 by the world, India has set the target of 2025. Achieving this target is a big task as the plan had envisaged an incidence of only 77 cases per lakh population by 2023. The programme also aims to reduce the mortality to 3 deaths per lakh population by 2025.

Based on the theme, the following activities were carried out like delivered lecture, oral presentation, and quiz competition. This year the symposium was jointly organized by Department of Nutrition, Mugberia Gangadhar Mahavidyalaya with Bhupatinagar Mugberia Rural Hospital, Bhagwanpur –II. There were 106 (F-69, M-37) students, our all faculty members, some medical staffs Dipanjan Manna (STS), Biswajit Maiti (MT-lab/STLS), Swadesh Kumar Rath (BSI), Sandhya Rani Mani (PHN) are present. The program was successfully completed.

Cause

Transmission is caused by bacteria that spread through the air and live inside of the TB.
You can get TB only if you come into contact with people who have it.
TB is passed when you are with the infectious active form of tuberculosis (spread through coughs, sneezes, etc.)

RISK FACTORS:

- Current or former TB
- Living in overcrowded areas
- Spending time in a hospital or nursing home
- Close contact with a health care worker who cares for patients with TB
