**BRIEF REPORT ON SEMINAR ON: “Conference on Save Water for Better Future in
Perspective of Maintenance of Health and Environment”**

**Organized by Department of Physical Education in collaboration with in collaboration with
Research Cell of the College., West Bengal, India**

The resource person was as follows:

1. Gourhari Acharaya
2. Dr, Aityanarayan Adak

In the beginning of the seminar our respected principal sir, Dr. S.K. Misra has given some brief introduction about the seminar. After that the Theme of the seminar has been given by our HOD Dr. Debashis Ray, after that the expert were introduced by our head of the department.

OBJECTIVES OF THE SEMINAR

1. To aware about the importance of water in our daily life
2. Water prevents overall dehydration
3. It helps excrete the waste in our bodies through perspiration, urination, and defecation

During seminar

Water is a priceless gift for humanity by nature; Life is possible on earth due to water. In India and other countries, people are battling water scarcity while three-fourths of the earth is surrounded by water. Due to water scarcity, people teach us to save water and protect the environment, life and the world because of the difficulties faced by people in different areas. Water is the most important source of life on Earth because we need water to fulfil all the activities of life like drinking, eating, bathing, making clothes and producing crops.

Without water pollution, we need to save water for the proper supply of water for the future generation. We must stop the waste of water, use the water properly and should maintain the quality of water. Clean water is

affecting the lives of people in India and other countries of the world in many ways, and the lack of clean water is becoming a major problem. This big problem can not be solved by the people alone or by a group of some groups, it is a problem for which people's efforts meet at the global level.

Water-saving is becoming an important global issue as water demand increases but water supply is likely to become less yet to be paid to population growth and climate change. Water maintenance in the urban residential sector is highly related to land use and development density, as well as other socioeconomic and behavioural characteristics of residents. Water conservation in the industrial sector has been the most successful partially because of financial incentives to reduce wastewater. Water conservation in the agricultural sector has been slow and has much room for improvement to save water through educational, economic, and policy incentives. Water conservation at one scale may not necessarily save water at another scale.

This is why it is important to conserve and sustainably use it for the health of human society, life support systems and maintaining ecosystem services of the planet earth. In India, ensuring water security is a way to ensure food and nutritional security as well as economic security. The National Water Policy and the National Water Mission are all smart steps in this direction. The programme was ended by the vote of thank which was given by our faculty members Dr. Adityanarayan Adak.
