A SHORT REPORT
OF

NAAC Sponsored two day National Seminar on

"Information and Communication Technology (ICT) and Systematic Teaching Learning: Prospects and Challenges in Rural Setup"

Date : 4th & 5th December 2018

SUBMITTED BY

INTERNAL QUALITY ASSURANCE CELL (IQAC)

Seminar Report

NAAC sponsored two day National Seminar on "Information and Communication Technology (ICT) and Systematic Teaching Learning: Prospects and Challenges in Rural Setup" organized by IQAC, Mugberia Gangadhar Mahavidyalaya.

Day 1

The two day National seminar on the above theme was organized by the IQAC of this college with a motto to engage different scholarship about uses of ICT in higher education into a single platform. It was held on 4th & 5th December with an approximately 280 delegates including students of the college and other institutes. About 27 teaching and 12 non-teaching staff of the organizing college were present in the seminar. The seminar was multidisciplinary in nature, and subsequently various papers from different departments were received by the organizing committee. Scholarly papers were presented by the resource persons and delegates that dealt with various developments in the ICT enabled practices in the higher education. The topic has been widely discussed by the invited speakers and other paper presenters which enriched the audience. Speakers were significantly contributed to the main ideas that how could we systematize the use of ICT in a rural setup.

After the official inauguration and the inaugural songs, Dr. swapan Kumar Misra, the Principal and Organizing President of the seminar welcoming the guests with warm greetings, from his point of view the uses of ICT is the need of the time. As a rural and backward college of the West Bengal, it is a challenge to incorporate ICT enabled teaching learning into the class room, and for that we need to upgrade our academic infrastructure as well as the mentality of the teachers. The world is moving fast by using ICT as the key component of the teaching learning process. At the same time most of the institute in India is also moving ahead using their ICT infrastructure, so he pointed out that to cope up with the recent phenomenon backward colleges should come up with the modern technology based teaching learning.

Prof. Ashutosh Kumar Singh, NIT, Kurukshetra, Hariyana delivered the Key-note address on 4th December 2018. His topic was "Application of Internet of Things in Higher Education". He spoke about how the IoT revolutionaries the practice of teaching learning. He has interact and envisioned that the current era is the emerging Internet of Things (IoT) era without any doubt, which is equipped with multiple technologies, real-time analytics, machine learning, commodity sensors, and embedded systems ubiquitous computing & networks of interconnected and Internet-enabled objects. The Internet of Things (IoT) has conquered the entire world by connecting various objects around us. It has captured almost every field like Smart home, smart city, digital health, connected car, connected industries, smart supply chain, smart grid and smart agriculture etc. It seems, like every day a new company announces some IoT enabled product. Even, higher education and research sector can leverage a lot from IoT. This digital transformation will reveal new insights that promise to change the way we think, learn and implement things in our real life and more specifically in the future education system.

Professor Ujjal Ghosh from Qatar University Doha has delivered an excellent invited special lecture from his experiences he got from different universities, he has pointed out that the idea of ICT has lot to do with the modern trends in this academic era. He enunciated that the world is moving fast with ICT enabled teaching learning, even the idea of traditional class lectures is getting modified by the uses of ICT, learning through computers, storing the lectures as data and that enabled the students to study before entering the class rooms is the need of today's time.

Similarly the other lectures were also important. Professor Kaushik Roy of Computer science Department, WBSU has delivered an excellent picture on Use of open-source software in teaching and learning. He has pointed out that, Technology has developed significantly over time and different solutions have come up to aid us in daily life. The education system has not been an exception to this. Students have benefited hugely from the technical advances. Not only has the preparation of notes and presentations simplified, but also the accessibility of study materials like documents, audio and video lectures has increased tremendously. Now different licensed as well as open source softwares are available which can easily assist both students and teachers to easily perform different tasks which were earlier extremely tedious. It has often been observed that the students from Computer Science and IT background tend to be more proficient in

handling as well as taking care of these softwares. Moreover, the people of the rural areas further lack behind in this field. Use of audio and video based media can also be of great help for them. Thus it is very much important to make these people aware of the different solutions which they can use in the field of academics for a more fruitful result and easier experience.

Dr. Goutam Panigrahi, Dept. of Mathematics, NIT Durgapur has also significantly emphasized on how we could use the ICT as a method to strengthen rural academic institutions. His topic was "An Approach towards Providing E-Learning Services in Rural Areas". His main argument was that with the use of e-learning we could be able to modernize our teaching learning system. He pointed out that Information and communication technology have brought a change in education and introduced new concepts of teaching and learning. Learning management system is one of the key tools used by the educational institutions to provide e-learning. To promote modern education in rural areas, a perfect, cost effective learning management system has to be established. E-learning is a computer based tool used to disseminate education among all, from anywhere and at anytime. Today, e-learning facility is available through internet, although in the past this is available through different primitive computer-based tools. Now the advancement in internet technology, E-learning offers the facilities like sharing of learning materials, videos,slide shows etc. It also helps us to conduct online classes and gives an environment that helps learners to communicate with teachers and professors.

Day 2

The first speakers of the day two was Prof. Samiran Chattopadhyay, Professor, Department of Information Technology, Jadavpur University, he was vastly experienced and delivered an excellent paper on Role of ICT in teaching and learning. He has emphasized that, in recent times, technology integration in teaching has revolutionized the learning experience of the students beyond imagination. A teacher wants to create her lecture materials using slides, videos, audios of her own and/or from other sources which may be available in the net. She wants to have a blog, in which she would regularly post her teaching experiences and reflections. She needs to know the basics of creating and editing media data. She also wants to be more aware about the network technologies including mobile technology which she uses in her everyday class. She likes to take online tests and quizzes for the students. She desires to understand the technologies which will enable her to do such things. She is interested to know how ICT has been applied not

only in teaching but in several walks of life. She finds it necessary to know about computer ethics and etiquette so that she may become a complete teacher. In his talk, he explored the concept of Information and Communication Technologies (ICT), its evolution and its application in professional development of a teacher. He also pointed out about network technologies, media technologies, security in the internet and good computer practices that delve into applications of ICT in our daily life. Prof. Chattopadhyay also discusses the features of ICT & few concerns regarding safe use of ICT that makes it widely applicable.

Prof. Parthasarathi Mukhopadhyay, Professor & Head, Department of Library and Information Science, University of Kalyani, has delivered an excellent lecture on "Towards integrated Information services in college libraries: a discovery approach" . He pointed out that most of the college libraries are now providing automated library services along with other information services like institutional repositories, access to electronic resources, access to consortia based resources and access to open access knowledge objects. But these resources are available in academic libraries under different retrieval silos. As a result, end users are running from pillar to post to obtain required documents. They are moving from one retrieval interlace to another depending on types, origin and terms of availability of the resources. It's a sorry state of affair as far end users are concerned. Through his lecture he has provided a solution towards this prevailing retrieval problem in academic libraries. It shows how easily it is possible to integrate different retrieval components of an academic library by using open source discovery tool and open standards. He also provided a solution to integrate both subscribed resources and open access resources in the same end user interface.

- ❖ There are 28 papers including the papers of the invited speakers are being presented in the seminar. The details of the papers are supplied with the seminar brochure.
- ❖ After questionnaire, in the final discussion, it has been decided to incorporate digital mode of teaching learning side by side with the traditional teaching learning. The seminar was concluded with valedictory address and vote of thanks from the organizers.

Outcome:

The outcome of the seminar is immensely helpful for the organizing college. The teachers and students are benefited from all the deliberations by those eminent speakers. The college has

decided to open up computer science department in near future to strengthen the ICT enabled teaching learning. The IQAC has placed a report to the principal to upgrade all the class rooms with modern technology and semantic enrichment of its available resources.
