A Comparative study on Health Status between Antacid consumer and non consumer woman.

ABSTRACT

In family needs in everyday life; housekeeping and maintaining the home; and making clothes for the family—and who is not employed outside the home. A housewife may also be called a *stay-at-home mother* or "SAHM". In the present study a survey was conducted to compare health status between Antacid consumer and non consumer urban woman. The survey was carried out at Bhagwanpur-II block area, Purba Medinipur, West Bengal. The data was collected for Antacid consumer (n=15) and for Antacid non consumer (n=15). A housewife is a woman whose occupation is running or managing her family's home caring for her children; buying, cooking, and storing food for the family. The survey was found that different measurements like height, weight, blood pressure, pulse rate, waist and hip circumferences, were carried out. The participants were asked about their hygienic condition and diseases. It was found that there was no significant ($p>0.05$) differences in body mass index, systolic pressure, diastolic pressure, pulse pressure, pulse rate between antacid consumer and non consumer woman. But it has noticed that waist hip ratio are significantly ($p<0.05$) lower in antacid consumer as compare to non consumer. It was observed that more percentage of antacid consumer was suffering from anemia, constipation, Menstruation, hypertension, as compare to antacid non consumer. It was found that more percentage non consumer were hygienic is proper maintain from washing of hands after toilet and washing of cooking utensils consumer.

Keywords: antacid consumer and non consumer woman, Health, Comparison, Body mass index, Waist-hip ratio, Disease, and Hygienic condition.
